AB - The polystyrene foams, useful as construction materials, are

manufd. by (a) prepg. a warm aq. soln. of Na borates, (b)
introducing polystyrene beads into a container and spraying the
fluidizing beads with the warm soln. to induce preliminary foaming, (c)

17.06.2005 13:34:47

feeding the preliminarily foamed polystyrene beads to the gas-permeable container and removing water upon air-drying and/or heating to promote and complete preliminary foaming, (d) pooling the polystyrene foams having minute roughness on which Na borates are fixed, (e) feeding the preliminarily foamed polystyrene to a mold and heating with steam, and then (f) solidifying the molded foam block upon cooling. The thermal insulation foams may be laminated with a metal plate, a plastic plate, or a wooden plate. Manuf. of polystyrene foams contg. Na2B8O13 and termiticidal effect of the foams were shown.

ST - biocidal polystyrene thermal insulation foam sodium borate
